

THE BLUESKY INDUSTRIAL DUST COLLECTOR SHOWN ABOVE INCLUDES ENCAPSULATED FILTERS, REVERSE-PULSE FILTER CLEANING, AND ULTRA-QUIET FANS. ALL INTEGRATED INTO ONE MACHINE.

Up to 60,000 SCFM airflow capacity, for ultra-hazardous and non-hazardous airborne contaminants

INTRODUCING BLUESKY TURNKEY SERVICE

For permanent installations or temporary rentals

Rent, Lease, Purchase

BlueSky is revolutionizing the dust collector industry—it's no longer necessary, or even desirable, to own your dust collector outright. Simply rent a machine, short- or long-term, from your waste management company, equipment rental company, or directly from BlueSky.

Permanent, Temporary

A BlueSky® dust collector can be used as a mobile dust collector or as a permanent-installation dust collector. We make the bold claim that it performs both functions better than any other industrial dust collector on the market.

Rent, Lease, Purchase

BlueSky is revolutionizing the dust collector industry—it's no longer necessary, or even desirable, to own your dust collector outright. Simply rent a machine, short- or long-term, from your waste management company, equipment rental company, or directly from BlueSky.

Industrial dust collectors have never looked like this before

Game Changer

What makes a BlueSky® dust collector unique? Most importantly, you never touch contaminated filters! When it comes time to replace filter cartridges, you simply exchange the SmartBox® module (think inkjet cartridge). All our competitor's dust collectors require individual filters to be removed one-by-one (a risky operation).

The used SmartBox is taken away and disposed of or serviced appropriately.

SmartBox® Technology

The SmartBox® module is key to risk-free, safe and environmentally-friendly dust collector usage. The SmartBox encapsulates the filters and, in the case of hazardous dust, it's where the filtered dust is collected. At the time of service a SmartBox is removed by you, or your service contractor, and a new or re-conditioned SmartBox is installed. Now that's smart!

You never touch the dust or change dirty filters ever again—a revolutionary new way of handling dust in the workplace.

True Modularity

Most industrial dust collector companies offer some form of modular design, but BlueSky has reached an unprecedented level of simplicity with its modular system.

It takes only a few bolts to attach a new section. Each addition changes the machine's capacity and/or functionality. For example, incorporating HEPA filtration simply means adding an additional section.

It's so simple, it often elicits the reaction

"Why hasn't anybody thought of this before?"

BlueSky® dust collectors consist of one, two or more sections, a variable capacity, modular system, that can grow with you.

The Genius SmartBox® System

Using a BlueSky® dust collector with its patented SmartBox® Technology means hazardous dust and filters are always encapsulated, during use and disposal. Nobody touches any pollutants ever. It protects worker's health, saves the environment and shields businesses from future lawsuits.

Silo Bin-vent

A SmartBox® system is also an optimal-solution silo bin-vent.

Conveyor/Transfer- station

SmartBox® modules can be easily installed as conveyor/transfer-station dust control systems
